

Monoclonal Antibody against Human CRP (8G1)

Catalog Number: 21120

Size: 100 ug

Host: Mouse

Introduction to the molecule:

C-reactive protein (CRP) is a circulating protein mainly secreted from the liver. This acute phase protein consists of five identical non-glycosylated subunits of 23 kDa, that give rise to a symmetrically arranged globular protein with molecular weight of approximately 120 kDa.¹ It has long been recognized that CRP is closely related to immunology, inflammation and host defense; as a result it has been used as an inflammatory marker. However, the development of high-sensitivity CRP (hsCRP) ELISA had addressed its role in other clinical issues. There is accumulating evidence suggesting the important role that CRP plays in mediating cardiovascular diseases (CVD) and type 2 diabetes.²⁻⁴ Normally CRP is presenting only in a trace amount in circulation (<1 µg/ml)⁵⁻⁶ but can increase over 1,000-fold under acute inflammatory state. Individual with blood CRP levels <1 µg/ml, 1-3 µg/ml and >3 µg/ml is considered to have low, moderate and high risk, respectively, of CVD and myocardial infraction.⁷ Therefore, blood CRP level has become a promising measure of CVD risk.⁸⁻⁹

Isotype/Preparation:

Mouse IgG; Affinity chromatography on a column with immobilized protein G.

Immunogen:

Recombinant full-length human CRP in *E.coli*.

Specificity:

The antibody detects human CRP.

Formulation:

Supplied in PBS. Store at -20°C. For long-term storage, aliquot and freeze at -70°C. Avoid repeated freeze/defrost cycles.

Application/Usage:

This antibody can be used as a capture antibody in a human CRP ELISA in combination with monoclonal anti-human CRP antibody (Cat. No.: 21121)
